

Instructions for Applying Decals to Shapeways Konami and Dinky Eagle Pod 3D Printed Models

Water-Slide Decals: The water slide decals are printed on very thin white decal paper. Care should be taken since they fold in on themselves easily. There will be more decals enclosed than needed, so you can spoil a few.

Decals do not adhere easily to all surfaces, so coating your model with a clear coat paint (I use a semi-gloss clear spray) helps the decals adhere better. Later, a coat of decal spray should seal them nicely to the model. Use very sparingly.

Cutting the Radiation Labels: The radiation labels are intended to be applied to the nuclear waste barrels and should overlap slightly when wrapped cylindrically around the barrel's body.

Cut the labels by using the blue guide boxes. If you use a ruler and cut *inside* the areas defined by the blue boxes, you should get a good fit. Note in the illustration below, the green lines indicate where to cut:

Cutting the Alpha Moonbase Logos: There are no guides to cutting these. You'll want to cut them just outside the blue border of the trapezoidal logo leaving just a little white on the outsides, as shown with the green lines.
